

Lab3

Task 1

You are required to help a new Linux user.

Mr. Tom is new Ubuntu user. He wants guidance regarding shell scripting to perform following tasks:

1. Create a simple script which will take two command line arguments and then multiply them together
2. Create a simple script, which will ask the user for a few pieces of information then combine this into a message which is echo'd to the screen.
3. Now Mr. Tom suddenly lost the track of his current location. Help him find his location.
4. He wants the list of all files present on home directory.
5. Display the current time.
6. He is done with the task and he is happy with your work. He want to display a thankyou message.

Task 2

1. Write a simple shell script that uses arithmetic operators (+, -,*) using double parenthesis with printing your own roll # with the results of operations.
2. Write a simple shell script that uses all relational operators with printing your own roll # with the results of operations.
